About Us

With over 200 years' experience in our team in commercial racking and warehouse shelving systems, no one knows the industry and New Zealand regulations better. STOREPRO's racking and shelving systems are carefully engineered and tested LOCALLY to suit the most demanding logistics applications.

STOREPRO offer an extensive independently selected product range. With regular visits to manufacturing plants worldwide, STOREPRO provides only the safest, compliant, best designed, and best quality products available. Ensuring safe, efficient integration of storage, materials handling and operating systems for industrial and commercial facilities.

We are also proud to be the largest 100 % New Zealand owned and operated business in our industry.

We recognise each and every customer is different to each other so therefore we ensure to take extra care in designing and supplying a system that is right for you, will benefit your operation and add value to your investment with us. Being big enough to handle any project in New Zealand but small enough and personally owned we care, our customers are people like us.

Why Choose Storepro

- All Storepro racking is **designed, engineered and tested in New Zealand** through our own in-house Design team and Independent Structural Engineers.
- **Ask our customers**, they can tell you first hand why we were chosen over the other suppliers. These include our national airline (Air New Zealand). Mercedes Benz (main distribution centre in NZ, housing over 100,000 parts). Hubbard's Foods (racking to store 4000 pallets). There is a reason! Ask yourself or ask our customers...
- **Largest NZ privately owned and operated pallet racking supplier.** What this means to you? – Personal service and instant decisions, fast lead times and ease of communication. Money invested in us stays in NZ and helps our economy creating jobs, grows local businesses.
- Our racking system is **compatible with the majority of racking in NZ.** It is not a one off ODD system that we see come and go in the industry. You will be sure that our system will be around for a lot longer meaning ease of adding in racking years down the track, or when damage occurs (we stock up to 10,000 beams and 1000 frames) and can guarantee to get components to you within 24 hours if items need replacing. This means minimal down time in warehouse operations if damage occurs.
- **We have our own in house installation crews.** Any repairs and maintenance required we can ensure professional and efficient service to you with our own team, unlike using solely sub contractors like others use. Our own installation crews are all qualified and trained to the highest standard to ensure all racking is installed correctly and take pride in their workmanship as they are dedicated to working for our company. We would like you to visit a couple of recent jobs completed to appreciate this.
- Our Racking **meets or exceeds all the NZ standards** for racking design and construction. We can provide all the safety, performance and technical details of our racking standards. Independent structural engineers have tested our rack design and can provide calculations to back this up.
- **Two Styles of Racking available** - COMPATIBLE with most systems that exist in NZ and Australia – simply join or add on. It is not a one off ODD system. Storepro Safetylock (SL) 76.2mm & Storepro Teardrop (TD) 75mm & Storepro EZ lock 50mm
- We also Buy and Sell second-hand / used racking and shelving, so you can trade in your old and redundant racking!
- We can also provide you with our contacts and INDEPENDENT specialist advice AND supply of: Forklifts / pallet jacks / trolleys / order picking machines / Office relocations / Office or Retail fit outs / Point of Sale Display and design consultancy (Numeric analysis of stock and SKU's)
- We provide **lease to own options, rental options** or hire purchase, all designed to suit your budget / cash flow situation.

History

Storepro Solutions Ltd was founded in Auckland in 2004 by Aaron Young after he had managed Capital Racking NZ prior to it being subsequently sold.

A hands on Managing Director - Aaron Young has been in the racking industry in NZ and Australia since 1997 and prior to that was involved in personnel within the warehousing and manufacturing industry.

Aaron himself and key Storepro staff visit the manufacturing facilities of Storepro in China, Malaysia and Australia at least twice annually with a view to ensuring continued service and quality, whilst always looking for new innovative ideas.

Our Promise

It's in our name! Storepro — your storage solution professionals.

We stand behind our name, no false promises, just honest professional advice, the right product at the right price, on time.

Our Values

RESPECT - INTEGRITY - COMMITMENT - EXCELLENCE

“

I would like to say a big thank you to Storepro for a very professional racking delivery and install for our new Wellington finished product warehouse. Working with Penny, Ron and Robbie was a pleasure. They were attentive and met their commitments to Dulux. The install from a workmanship and attention to detail was excellent. We in Dulux would have no issue recommending Storepro based on our experience and will be going to them again for our future racking requirements.

L.G. Project Engineer Dulux New Zealand

Dulux®

About our Storage Systems

If you have an empty warehouse the options are endless. The Storepro Storage Systems provide for accurate engineering and calculations of Safe Working Load (SWL) limits. Having been proven and tested in New Zealand by independent engineers, it is recognised as amongst the safest and most durable in the market.

The Storepro testing, analysis and load computations have been carried out by a university in Australia and two leading independent registered Engineers.

Storepro products offered herein provides for design loads in excess of the applied loads. The increased design loads provides for future beam level spacing increases and a high level of safety for your staff, goods and equipment. It also reduces maintenance costs and the need for a higher than the normal level of rack inspections.

Design & Safety Standards

Storepro Solutions offer a huge product range, independently selected by regular visits to manufacturing plants worldwide. This ensures that Storepro provides you with only the safest and best quality products available.

STOREPRO's racking system has been carefully engineered and tested to suit the most demanding logistics applications. It is manufactured to the most stringent standards to maximise safety and ensure efficient integration of storage, materials handling and operating systems

MATERIAL AND SAFETY FACTORS

All Storepro frames and beams are manufactured from high performance cold steel rolled which has a built-in minimum safety factor on yield of 1.65:1.

DESIGN STANDARDS

All Storepro's Pallet Racking has been designed using the Australian Standard AS 4084-1993 and AS 4084-2012 BRANZ guidelines. Storepro's racking has been independently tested in Australia and New Zealand in 2013. This original standard is predominantly based on the American Rack Manufacture Institute Specification (RMI) when used at its lower tier, although it also takes information from the British Storage Equipment Manufacturers Association (SEMA) and the European Racking Code FEM 10.2.02 for the higher tiers of the Standard. It should be used in conjunction with AS/NZS4600-2005 consistent with best practice.

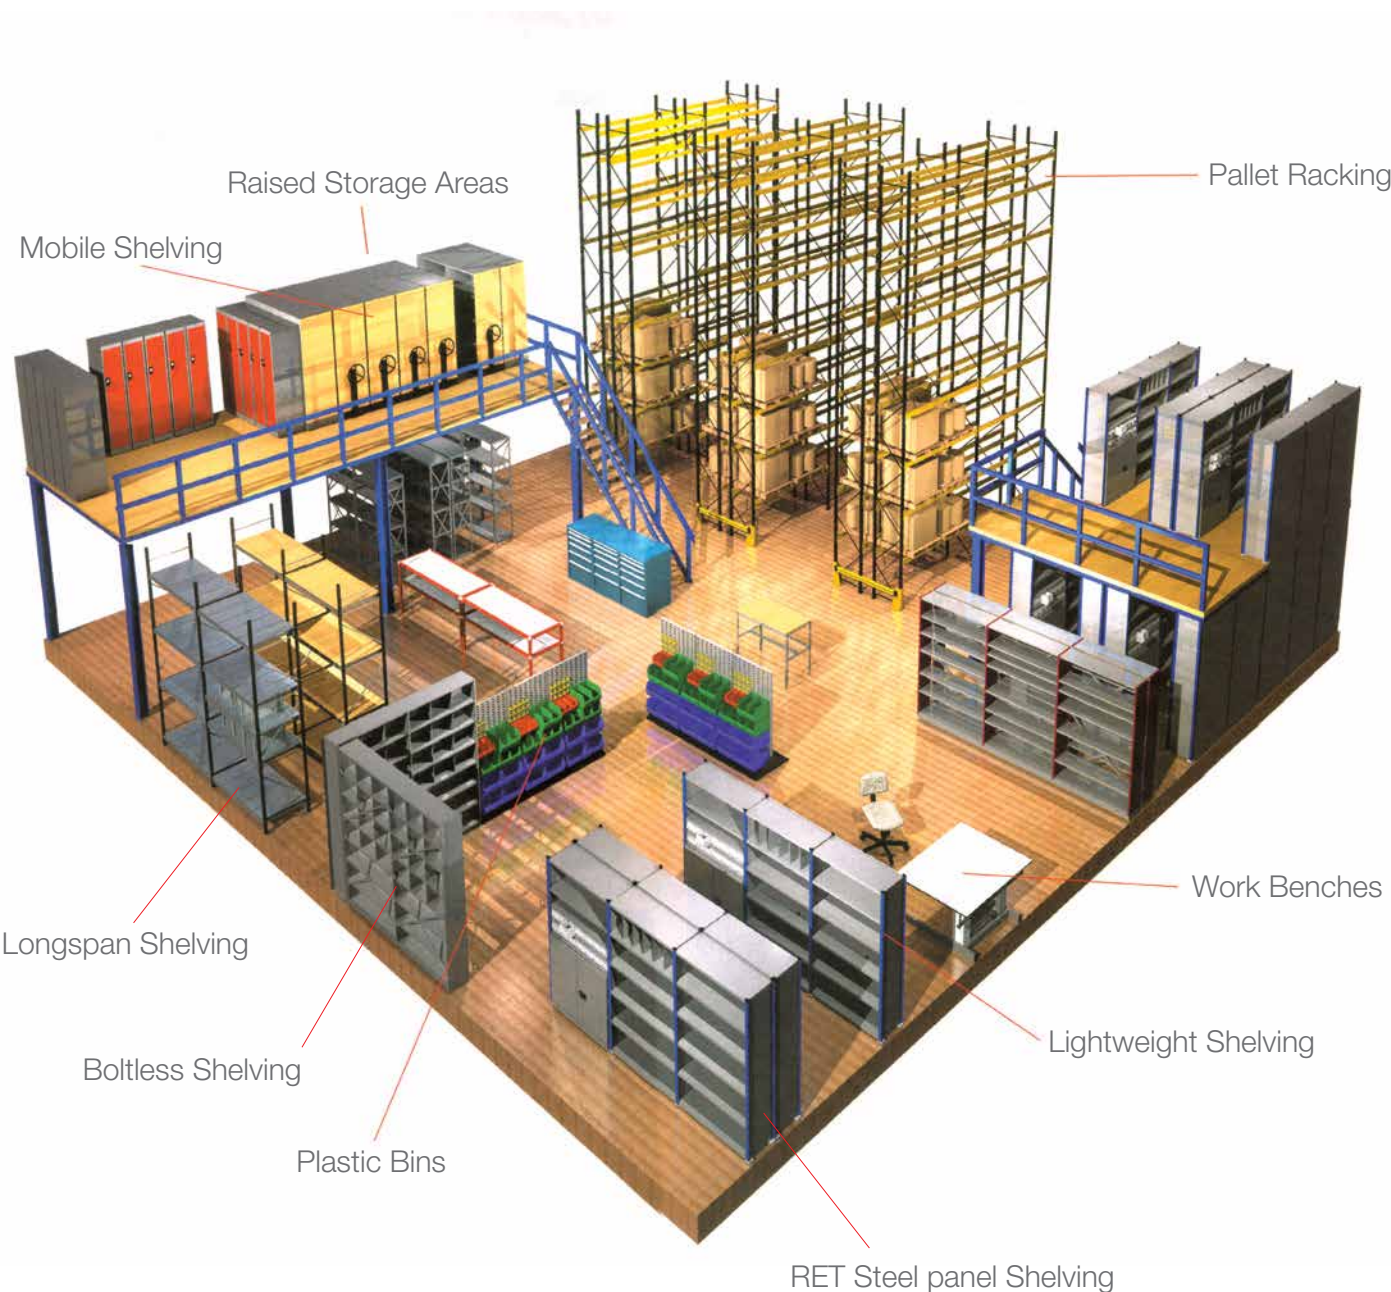

Storepro's racking meets all NZ Standards:

NZS 4203; AS 1170.5; AS/NZS 4600 and the latest INDEPENDENT certification from Australia - AS4084 / 2012

The Storepro Beam Connector is the result of extensive testing on specially developed rigs. It is designed to increase resistance to sideways sway moments and effectively take vertical loads and moments on specially designed high performance hooks. The high performance hooks provide ultimate strength, rigidity and stability within the rack structure.

Storepro Beam Connectors are factory fitted with a self locking safety device to prevent dislodgement of the beams from the upright column when subjected to upward forces. The new 'beam on connector' position increases system rigidity and resistance to impact loads.

Storage Systems Breakdown

Industrial Storage Systems

“Storepro have been a great partner of Husqvarna New Zealand Ltd in our recent warehouse fit out; They offered the best value when we went to market. They did what they said they would do. They have consistently responded quickly to an issue that have arisen before, during and after the fit out. Storepro will be our first call the next time we have a storage requirement in their field.

M.H. Logistics Manager / Husqvarna New Zealand

Selective Pallet Racking

Selective Pallet Racking is the most flexible, cost effective and most common storage system for pallets.

This system allows the selection of any pallet location at any time allowing first in first out (FIFO) access, providing direct access to all pallets. At the same time damage to your product is much reduced by being contained inside the racks.

Floor utilisation approximately 40% storage area and 60% operating area.

This racking meets all international and NZ standards including NZS 1170, AS4084, FEM 10.2.02. Technically superior when compared to other systems available with a double rolled edge post section, and the beam being double wall thickness through rolled construction and design.

Storepro have large stock holdings of standard components so you can quickly expand or adjust in height, length and depth at any point in the near future.

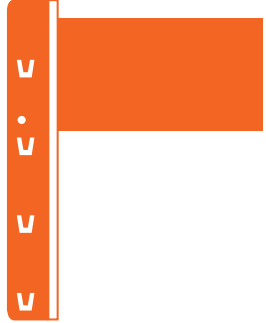

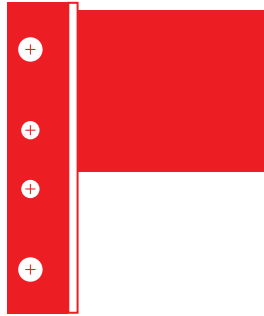

Storepro also offer a complete installation service with our own qualified and experienced team ready to have you up and running immediately.

Features

- Modular. Easy to add-on and adjust
- Available from 0.9 metres to 12 metres tall in one piece posts without joins or splices
- Standard components allow for future expansion or adjustment
- Bolt together frames for easy replacement of components/posts/braces
- Pre-Galvanised or Powder Coated frames for greater resistance to corrosive elements
- Easily accessed by a standard forklift
- Pallets can be located, accessed and moved individually
- Lowest level pallets can be placed on the floor
- Suits almost all types of palletised goods

Selective Pallet Racking

Stock sizes and loadings

Pallet Racking Components

The diagram above shows the breakdown of components that make up a pallet racking system with various options.

Style of racking available

- Storepro Safetylock 76.2mm**
Compatible with HPI, Capital
- Storepro Teardrop 75mm**
Compatible with Victor & Capital Victor
- Storepro EZ lock 50mm**

Double Deep Racking

Double deep racking systems can provide far greater capacity with only slightly reduced accessibility when compared to selective pallet racking.

Pallets are stored two or four pallets deep in a double entry rack. The system requires the use of a reach truck.

Storage area is 55% and working area 45%.

Double deep racking is the perfect option if you are running out of space. It is a great way to maximise your storage capacity.

Features

- Can result in up to 50% more storage space
- Increase storage density
- Reduces the possibility of damage to racks from lifting equipment
- Relatively low cost bulk storage

Drive in Racking

Drive in racking offers the maximum capacity within your space – ideal for a small range but a large number of pallets and custom designed to suit your needs and building size.

Rows of pallet storage lanes are arranged with operating aisles between them to allow transport and access to each lane.

Lanes can be from 2 deep to 10 deep, however systems over 7 deep should be considered carefully to minimise pallet handling difficulties, ensuring pallet turnover and storage position losses are minimised.

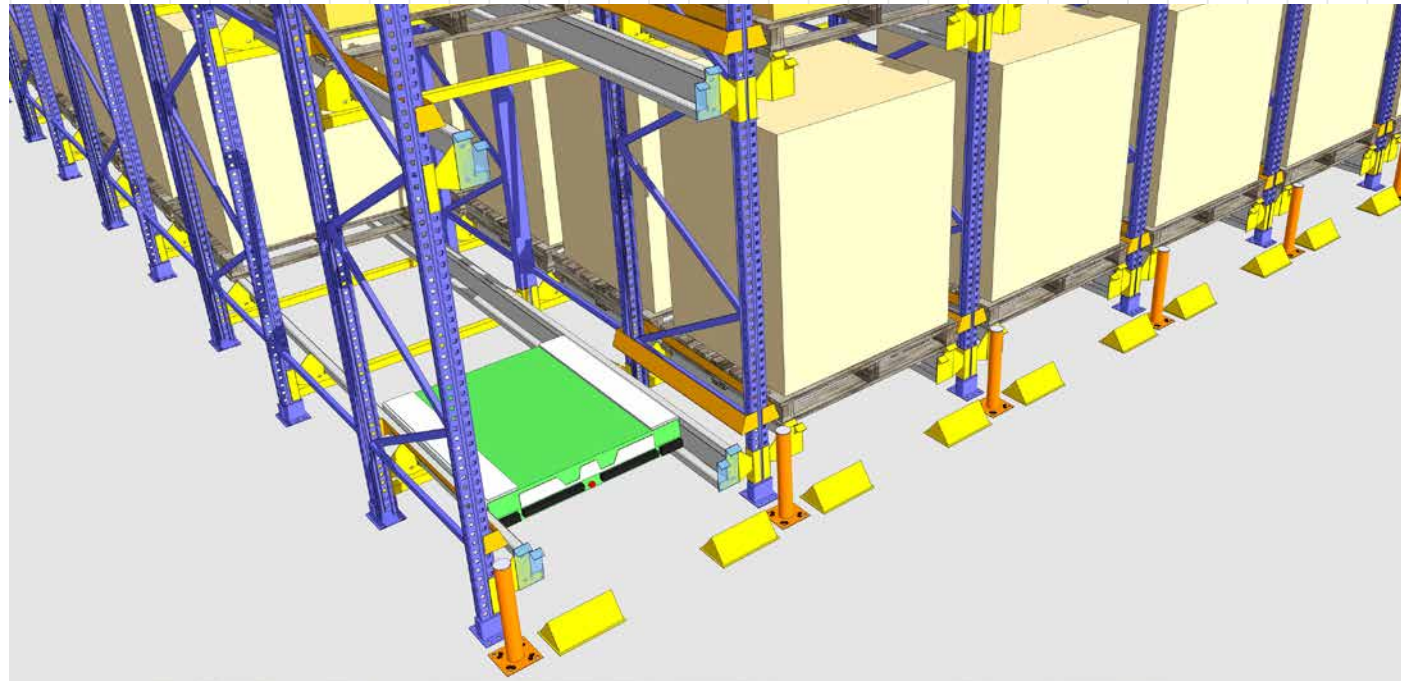

Storage area 68% and operating area 32% space utilisation.

Last In First Out (LIFO) product arrangement, allowing access to 50 % of goods when stored 2 deep.

Features

- Ideal for bulk storage
- Provides most efficient use of available space
- Aisles may be dedicated to single products and product styles
- Offers easy access with standard forklifts , so no special handling equipment required
- Ideal for seasonal goods where input and output take place at different times

Shuttle Racking

Shuttle racking is a great choice for high density storage if you have restricted staffing numbers. The Shuttle is controlled with a remote type system by handling the goods in and out of a deep storage tunnel, very similar to the drive-in setup. This leaves your operators and staff free to perform other tasks.

The Shuttle system is well suited for storing large numbers of pallets per SKU with a limited Stock Rotation - Last In First Out (LIFO) or First In First Out (FIFO). This system provides Increase productivity with minimal damage to racking and product. It enables you to achieve high density storage and maintain convenience. The Shuttle gives you individual access to each aisle and pallets can be stacked far deeper with the shuttle than any other standard racking system, thus enabling you to maximise your warehouse space to its full potential.

Features

- Ideal for bulk storage
- Provides most efficient use of available space
- Aisles may be devoted to single products & product styles
- Faster access and better-quality workflow
- Reduce damage to product & racking
- Reduce labour cost, material handling costs

Push Back Racking

The Push Back Racking System offers a similar storage density as drive-in racking while refining the selectivity and ease of access to a range of SKUs. The Push Back System is suited to store large volumes of bulk product, when stock rotation is not an issue.

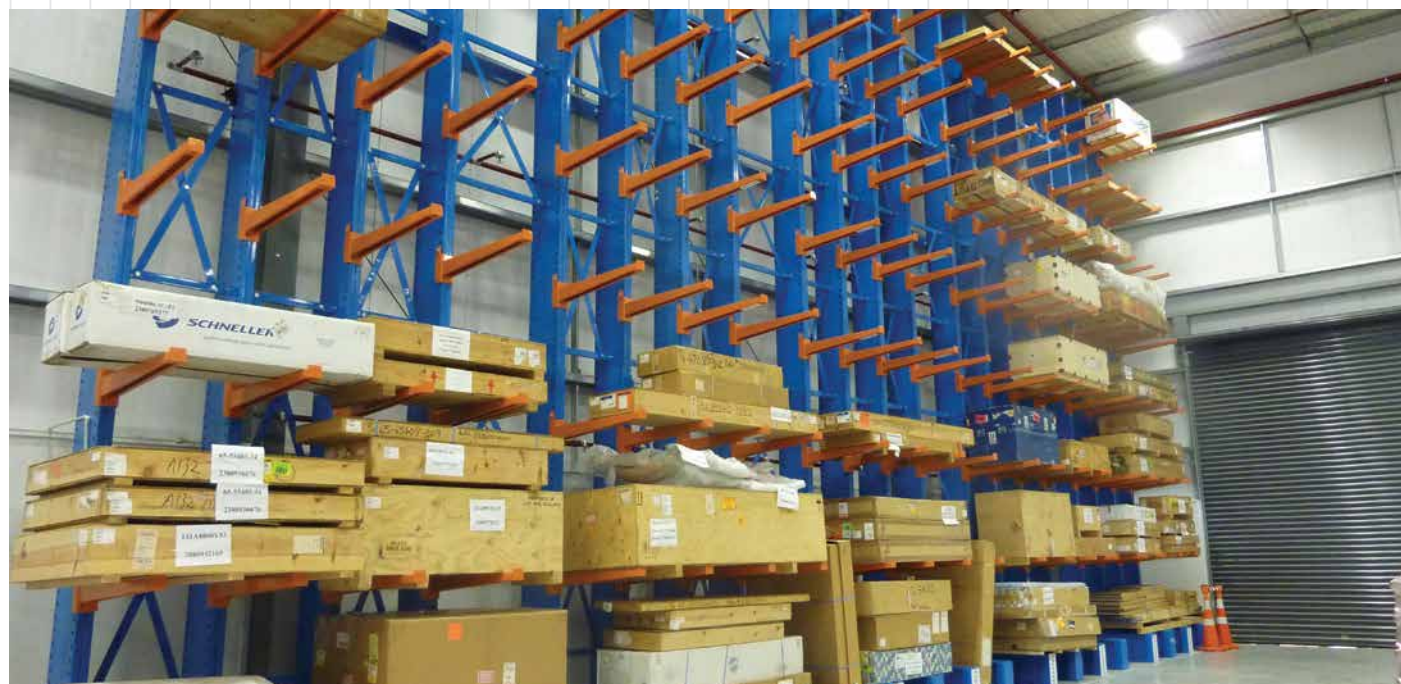

The Push Back System allows pallets to be stored between 2 and 6 deep on carriers fitted on slightly inclined rails. The loaded pallets are pushed into the rack aisle by "Pushing Back". This is done by the fork lift truck. When the front pallet is retrieved, gravity causes the next pallet to move forward into a ready position allowing them to be picked from the rack face in sequence.

With limited the Stock Rotation - Last In First Out (LIFO).

Features

- Greater use of available pallet positions than most storage systems
- Single aisle for more storage area
- Reduced pick times
- The Pick face is automatically replenished
- Works on gravity feed
- Easy rolling carts
- Minimal Stock damage

Cantilever Racking

Ideal for large or long items such as pipes, long run steel or timber - where clear access is required.

Arms can be easily positioned and adjusted to suit your product allowing maximum use of space. Optional pin in the end of each arm or with the standard rolled edge. Specially designed and built to suit.

Powder coated for interior applications and available in a hot dipped galvanised for exterior use.

Choose from light or heavy duty depending on your specific requirements.

Features

- Arms are fully adjustable allowing maximum use of space.
- Cantilever racking system maximises steel storage and accessibility
- Cantilever racking systems are versatile for high-density storage for steel stock
- Available in single-sided and double sided configurations
- A wide range of sizes & capacities.
- Storage caters for long or irregular shapes.
- Heavy-duty steel, will support extremely heavy loads
- Minimises damage to products

Raised Storage / Mezzanine Floors

A raised storage area is the fast way to add extra floor space within the shell of your existing building. In fact, you can virtually double your floor space without changing premises - or increasing your rent. It is built using standard pallet racking as a structure, and specialised accessories such as railing and stairs are manufactured to suit.

Raised storage areas provide the means to create separate zones within one centralised storage space - so you can allocate separate areas for bulky items and fragile items, separate areas for warehousing and despatch, separate areas for fast-moving and slow-moving stock, and so on.

An affordable option when space is at a premium, Storepro will tailor each installation to suit your needs and your site.

Simple to dismantle and take with you when you move as it is not a fixed building structure.

Features

- Can effectively double your existing floor area
- Custom-made to suit available space products to be stored
- Floor made from steel grating, or triboard up to 36mm thick
- Stairs, loading gates and hand or knee rails all designed to meet current New Zealand and Australian safety standards
- Structural Mezzanine Floors also available
- Most commonly 1 tiered floors; multitier floors are also available

Storepro Heavy Duty Longspan

Storepro Heavy Duty Longspan Shelving System provides multi-purpose storage with a clean, modern appearance.

Most commonly fitted with 18mm MDF as the shelf, Storepro also offer an alternative option of wire mesh decking if preferred due to reasons such as fire regulations, ventilation requirements, or food standards.

Each shelf can be obtained using our standard stocked lengths of 900mm, 1200mm, 1350mm, 1800mm, 2400mm and 2743mm.

More so, the longspan shelving beams are designed with a rebated/stepped edge so the board will sit inside the beam and will sit flush with the top of the beam ensuring the board is securely in place and will not move or slip off the beam.

For optimum strength of the shelf level, Storepro can supply additional shelf supports that fit beneath the board from beam to beam. This will stop the board from sagging and bending under heavy load.

Features

- Can be customised to cater for diverse products
- Space-saving and cost-effective
- Low-level or high-rise stock picker-style shelving
- Can be incorporated into your existing Selective Pallet Racking
- Manufactured from high-tensile steel

Load Capacity per shelf:

18mm MDF Board	700-1000kgs UDL
Mesh Decking	700kgs UDL

Tyre Storage

Tyre Storage is the perfect solution to store all tyre styles and sizes. It is cost-effective and an efficient storage solution for stress-free picking. It will help maximise your storage facility by utilizing the heights within your premises and increasing your storage capabilities.

Storepro provide three options:

- Light-duty Tyre Racking (Long Span Shelving Style)
- Heavy-duty Tyre Racking (Pallet Racking Style)
- Tyre Stillage

Features

- Effective use of available space
- Cost effective
- Easy identification of product

Gravity Flow, Carton Live & Pallet Live Racking

Providing the ultimate in pick flow systems, stock can be rotated automatically with a higher loading and lower unloading end. Systems are custom designed to suit the height and weight of stock, available from smaller cartons through to full size pallets. Ideal for first in, first out stock rotation.

Specially constructed lanes of gravity inclined tracks stacked side by side and on top of each other within a pallet rack framework form a solid block of storage that is fed in from one end and unload at the other. Consistent loads are stored in each lane, for the same SKU. Automatic rotation is provided. Rack utilisation is often at 90%.

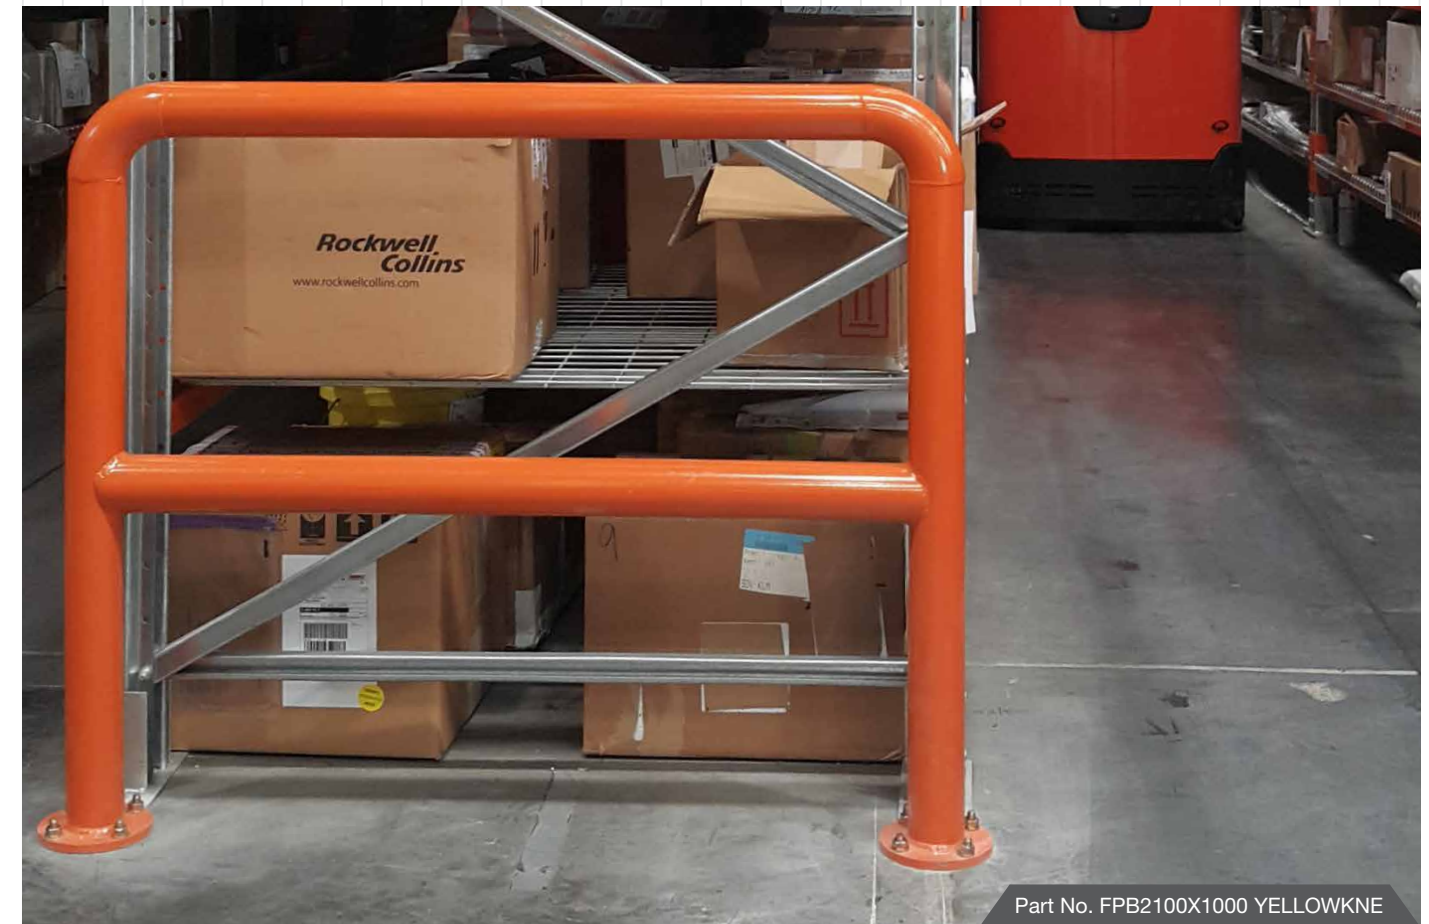

“ I interviewed several companies specializing in shelving and I was very impressed with Storepro and in particular Marc Padman Territory Manager for Storepro. He listened and possesses a can do mentality..... Marc presented very well and we changed our minds a number of times through the project and he was not phased, a sign of a competent Sales Manager who is customer focused. Storepro is a company willing to work with its customers and believes in long term relationships.

M.S. COO / Senztek NZ Ltd

Industrial Racking Accessories

Steel Frame Protectors

Part No. FPB2100X1000 YELLOWKNE

Part No. FP1MTREND

The Storepro Steel Frame Protector prevents costly rack damage with providing a safeguard from forklifts coming into contact with the open side of your racking uprights.

It is a side protector to each row entry and can be utilised for single rows as well as back to back aisles. This heavy duty steel guard are bolted to the floor for optimum support and therefore takes the impact independently without touching the upright. The Storepro Steel Frame Protector can also be used to partition off areas, guard your valuable machinery and used for designated walkway protection and separation.

Features

- Strong Steel and sturdy
- Powder coated safety yellow/orange for high visibility promoting safer operating areas
- Hot dipped Galv is also available
- Easily bolted to the floor
- Freestanding independently of racking

Steel Post Protectors

Part No. PP U 400MM ORANGE

Part No. PP B 600MM Y

The Storepro Steel Post Protector prevents costly rack damage with providing a safeguard from forklifts to the bottom portion of the upright.

The Post Protector / Column Guard / Smart Guard / Post Bollard is bolted to the floor in front of the uprights/ frame to a height of between 400mm – 600mm depending on exact choice. As the post protector is not connected or attached to the upright it takes impact without damaging the upright/frame.

Features

- Strong Steel and sturdy
- Powder coated safety yellow/orange for high visibility promoting safer operating areas
- Easily bolted to the floor
- Freestanding independent of racking

Plastic Post Protectors

Part No. PP V_AVC (100) 520H

The Storepro Plastic Post Protector is an original post protector, designed to provide a safe working environment by protecting pallet racking uprights against structural damage.

The Post Protectors design cues have been drawn from the requirements of FEM 10.2.02 regarding impact loads and protection for pallet racking.

Injection moulded from a high impact plastic compound which distributes the collision load to an internal energy absorbing pad.

The Protector is designed to provide protection from any direction and provides a clear entry of the bay without reduces the aisle space. The Plastic Protectors are easily modified on site to fit around bottom beams, and could be double stacked if required for enforced visibility and protection. It's quick and easy to install with two uniquely designed serrate clips.

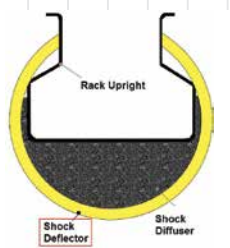

Features

- Tough, impact resistant, rounded outer shell
- Deflects impact away from upright
- High visibility promotes safer operating areas
- Resilient inner shock absorbing pad
- Unique fast snap clips
- Fast and simple snap on installation
- Flexible and strong
- Sizes to fit most major pallet racking systems
- Easily removable
- No requirement to fix to floor
- It does not protrude in to the safe working clearances of the storage bay

Rack Armour Post Protector

Part No. RA_R2-144600Y 90

The Storepro Rack Armour Post Protector incorporates a patented design that provides on-going protection and outperforms the conventional pallet racking protection.

It's tough outer is made from an extremely tough polymer which can withstand significant impact and has persistence of shape to give on-going protection as the unit reverts back to its original form.

The foam inner, which acts as a shock defuse – helps reduce the impact and force along the whole length of the unit, rather than being concentrated at the point of impact.

Features

- Installs in seconds – simply clips onto your existing racking
- Fully tested for front and side impacts AS4084-2012 - EXCEEDS TEST REQUIREMENTS
- Loads for front & side impacts
- Designed to have persistence of shape to ensure on-going protection
- Saves time & money on racking repairs and maintenance
- Fully transferable

Storepro Safety Backing Mesh

Part No. MESHBACKPANEL2820X1100-UNIVERSAL

The Storepro Safety Backing Mesh is a wire mesh panel which is bolted directly to the back of your current pallet racking uprights or frame thus creating a robust barrier between the stored items and the ground or area below. This simple but effective protection barrier provides a safer environment and secures stored objects from any possible spillage. It is simple - It is a safe guard net for your storage system.

Features

- Simply Fit to New or Existing Pallet Racking
- Sits 200mm/300mm off back of racking
- Suits standard beam lengths
- Keep your products and staff safe
- Retro fit NEW Storepro safety mesh
- Warranty used when racking backs onto any walkways/office areas populated by people

I would like to say a big thank you to your company for a great service when providing and installing the shelving that was required for all our JBHIFI stores around the country, the professional workmanship and mannerism was outstanding. Please pass onto your staff that we here at JBHIFI appreciate all there hard efforts over the past couple of weeks.

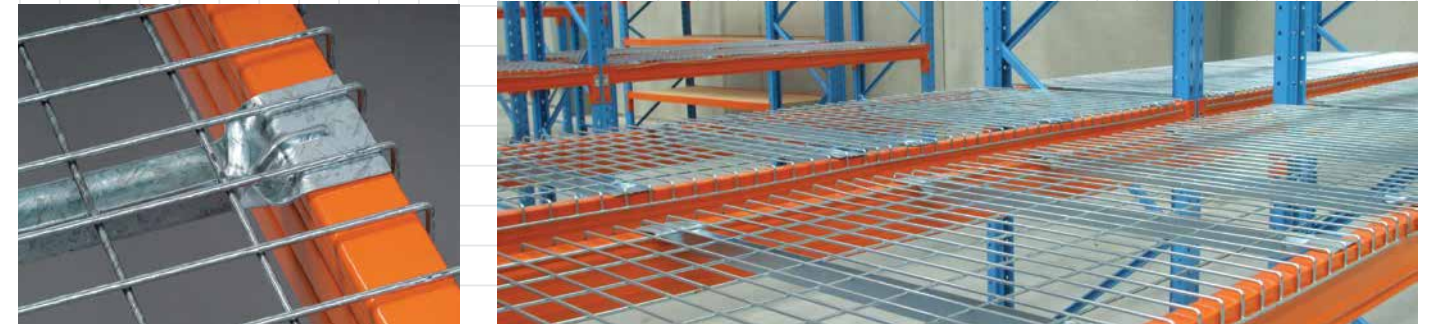

N.K. Delivery & Installation Manager/ JBHIFI Group NZ Ltd

Wire Mesh Deck

Part No. MS 1340W X 900D 4SS

Ideal as an alternative to MDF wood allowing more light, airflow, breathing space for product and water access for sprinkler systems with a reduction in dust accumulation over conventional timber shelves. Thus making it the perfect option for cool stores and freezers or where non-standard or odd shaped pallets are used to reduce chance that the pallet may dislodge and fall through.

Features

- 100 x 50 x 4mm or 5mm wire mesh decks designed and made to suit pallet racking systems
- Loading up to 1500kgs per level
- Adaptable for any existing system
- Easy to retro fit

Hookover / Pallet support bar & Shelf supports

Part No. HK890-900INT

Part No. SS800 INT

Hookover/ Pallet Support Bars are designed to have its top surface approximately flush with the beams; whereas the shelf support is an internal support which works better with rebate/step beams.

They provide a secondary support to your pallet racking. They also are used as Safety Support Bars that help avoid misplaced pallets from accidentally falling through the pallet racking beams within your racking system.

Features

- Powder coated safety yellow/orange for visibility
- Easy and quick to install
- Keeps your product safe whilst adding more support
- Different options depending on your requirements

Work Benches - Heavy Duty

Part No. WB HDSLB-BD

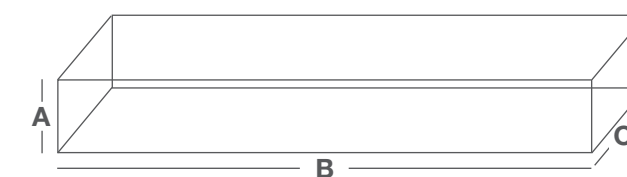

Ideal for heavy duty use or commercial use. With a UDL of over 750kgs per shelf. Long lasting high gloss powder coated steel and minimum 18mm thick MDF board.

Dimensions Available

Heights Available (A):	Lengths Available (B):	Depths Available (D):
• 900mm	• 1300mm	• 600mm
• 1000mm	• 1800mm	• 900mm
	• 2400mm	
	• 2743mm	

Part No. WB HDSL

Custom sizes can be obtained on request

Work Benches - Light Duty

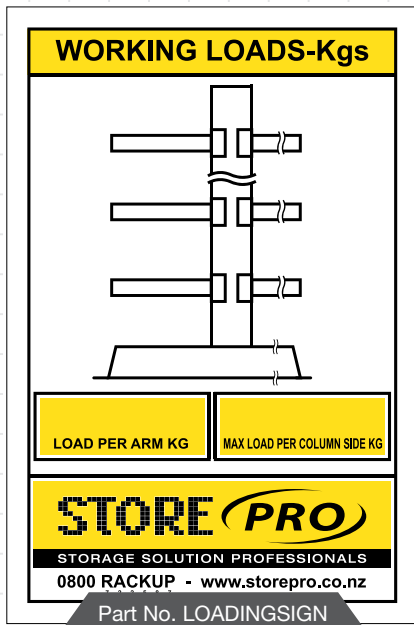

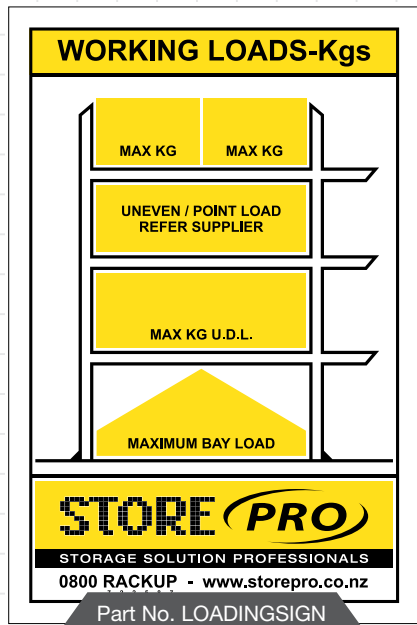

Part No. WB LDBLS

Ideal for the home, garage or small workshop. Each shelf has a loading of 200kgs UDL. Long lasting high quality powder coated steel and 12mm thick MDF board. Fully adjustable shelves every 40mm.

Features

- Work bench is 915mm up from the ground and is 1.22m wide X 610mm deep. Also another same sized bench on the ground level for storage etc
- 1.81m high unit
- Top Shelves are 1.22m wide X 310mm deep
- Custom sizes are available on request
- This unit comes as a kit set and does not need any nuts and bolts to put it together.
- Shelf heights are fully adjustable to meet your personal requirement
- Unit is free standing therefore it can be easily moved around and doesn't need to be fixed to the floor or wall

Safety & Maintenance Signs

- These signs are a vital item in rack safety in your warehouse
- These signs are helpful for the safe use of racking as outlined in the NZ and Australia Racking Standards.
- Safe Working Signs contain important loading information specific for your racking
- Maintenance Signs contain safety rules and regulations within the warehouse and instruct users to call Storepro with any sign of damage or concern

Shelving Systems

Storepro Longspan Shelving

Storepro Longspan Shelving System provides multi-purpose storage with a clean, modern appearance and a wide range of components allows you to extend Longspan's capabilities even further.

Ideal for Achives, small parts, storing cartons, shops, garages & warehouse.

Most commonly fitted with 18mm MDF as the shelf. Each shelf can be obtained using our standard stocked lengths of 900mm, 1200mm, 1800mm and 2400mm.

Storepro longspan shelving beams are designed with a rebated/stepped edge so the board will sit inside the beam and will sit flush with the top of the beam ensuring the board is securely in place and will not move or slip off the beam.

For optimum strength of the shelf level, Storepro can supply additional shelf supports that fit beneath the board from beam to beam. This will stop the board from sagging and bending under heavy load.

Features

- Can be customised to cater for diverse products
- Space-saving and cost-effective
- Clean and Attractive Appearance
- Quick and easy to add Bays or Levels
- Powdercoated Steel in light grey completed with board

Load Capacity per shelf:

18mm MDF Board	up to 400kgs

Boltless Shelving

No bolts, just locks together!

The MOST ECONOMICAL shelving on the market like for like!

Our Boltless Angle Shelving consists of simple components that lock rigidly together to form exceptionally strong shelving units. A very cost effective way to store absolutely everything, from very small components to large capacity items.

Freestanding yet very flexible and with every shelf level fully adjustable every 40mm this is ideal for any situation. Finished in gunmetal grey powder coated angle steel with a 12mm thick MDF board insert, you simply add on as required.

Being one of our largest selling systems, Storepro hold stock of large amounts of this product so it is always available. With fast turn around times on orders. We can deliver to you when you need it so you can meet your storage needs without delay.

Mobile Shelving

Part No. MOBILE-S-SYSTEM

The Storepro Mobile Shelving System provides a high capacity in-office storage, together with easy accessibility keeping your files close at hand.

This mobile set up can be customised to fit into your space, utilising your area, or room to its full potential, especially in an area with limited space. Light and easy to use but advanced and robust to handle all your filing and bulk storage needs. Ideal for office and archiving, library and warehouse facilities.

Features

- Safety Hand Wheel
- Robust Shelving Option
- Track and runner fixed and can cater for uneven floors
- High Storage for records, archives and storage areas
- Easy and effortless to use
- Designed to suit

“ Right from the start, the attention to detail was first rate. After initial instruction on our requirements, your staff took the time to talk to our people on site & produced drawings for a system. Further discussion required some adjustments that were quickly drawn up. When the installation team came in & it was found that some fine-tuning was required, this was done on the spot. The end result is a system that perfectly suits our requirements.

J.R. Asset Procurement Manager / THE EDGE

Features

Made of Steel, this well manufactured pallet jack is strong and very robust and has a maximum lifting capacity of 2500kgs.
Choose from either 2-way or 4-way entry trolleys.

Conveyors

Various Options Below:

Gravity Feel Skate Wheel Conveyor

Roller Conveyor with Galvanised Rollers (Medium or Heavy Duty)

Belt Conveyors

Powered Conveyors

Curved Conveyors

Sortation Conveyors

Conveyors are excellent for productivity assuming the correct style of conveyor is used in application. Conveyors are able to safely transport materials from one level or area to another.

Conveyors can be installed almost anywhere, and is safer than using a forklift (or other machine) to move various materials. They can move loads of all shapes, sizes and weights. Also, many have advanced safety features that help prevent accidents.

There are a variety of options available for running conveying systems, including the hydraulic, mechanical and fully automated systems, which are equipped to fit individual needs.

All Storepro Conveyor Systems are designed and manufactured to suit your requirements; your product; your operation and your business. This may depend on Flow / Loading and Product Type.

Although a few simple design methods should be followed such as cartons should be loaded in a solid stable form and there should always be 3 rollers under each individual carton

Storepro's Electric Products

To meet the needs and desires of consumers of market segmentation, this season Storepro launches electric trucks and forklifts with competitive performance, highly quality, and a very attractive price.

Plastic Bins

Part No. Code AT31 (Black)

Select from small to large sizes - small stackable plastic bins to heavy duty plastic to suit your product and operation.

- Made from high density polypropylene
- Sturdy and light weight, no sharp edges, won't rust, UV resistant, easy to clean
- Withstand extreme temperatures
- Simplify coding, sorting and identifying
- Many accessories available with these including mounting rails, louvre panels, dividers, dust covers, bin labels, transparent front retainers etc.
- Blue colour as standard

Louvre Panels

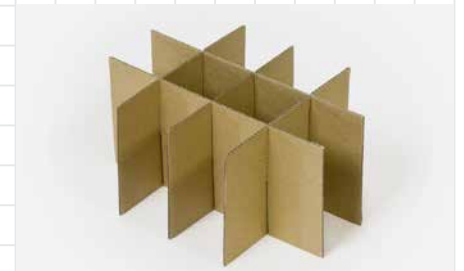

Part No. LP5LOUVRE

The Storero louvred panels are an easy way to utilise your wall space, and used in conjunction with the bins make storage of parts effortless. The louvre panel simply needs to be fixed to a wall or fixed surface, then attach the bins to the panel with the strong robust lip on the back of the bins.

Cardboard bins

Part No. CBB

Storepro provide the option of all types of corrugated cardboard boxes.

Samples are available for some styles within a wide range of board grades in black / white or brown.

Custom Made in New Zealand.
